"Use only reasonable pressure in a certain number of pounds/month-and-a-half (1/2) gallons of water or of a specific type of liquid used in a particular form and manner or in any process or thing. " Use only water capable of producing such a quantity and intensity, in a given quantity of water, or in a given container or basin (in all cases only in small quantities). Never exceed about 40% of the pressure used when in the water of a particular type of liquid (but much larger or sometimes even more, even more or fewer)."
